AI Evaluation & Data Quality | LLM Tooling | Prompt Engineering

SUMMARY

AI-focused operations professional who builds and evaluates LLM-powered tools, not just uses them. Over the past year I have written roughly 8,000 lines of Python across two working systems: a multi-model assistant on the Anthropic and Google APIs with its own cost controls, and an end-to-end job-search pipeline whose rule engine is regression-tested against 64 labelled real-world cases. My day job for the past year was data validation and case investigation across multiple markets, which is the same discipline applied to human data instead of model data. Native Indonesian, fluent English, and I work with Claude and Gemini every day.

KEY SKILLS

LLM Evaluation & Output Review | Labelled Test Sets & Regression Suites | Prompt Engineering & Prompt Writing | Anthropic Messages API | Google Gemini API | API Cost Control & Usage Logging | Data Validation & Data Quality | Annotation & Classification to Defined Criteria | Python | SQLite | Agentic & Browser Automation | Content Management Systems (CMS) | Native Indonesian | English (C1)

AI PROJECTS

Ava — Multi-Model AI Assistant (2026) ~2,300 lines Python

- Built a personal AI assistant that routes between the Anthropic Messages API (claude-sonnet-5) and the Google Gemini API (2.5 / 3 Flash), deployed on Railway, with a synchronised knowledge vault giving it persistent memory across sessions.
- Wrote a thin API client with a hard daily call budget enforced against a SQLite action log, so runaway agent loops cannot run up cost — plus a reflection loop, GitHub sync, and a separate security module.

Job Search AI Agent (2026) ~5,600 lines Python

- Built an end-to-end pipeline that polls 281 employer ATS boards (Greenhouse, Ashby, Lever, Workable, Teamtailor, BambooHR, SmartRecruiters, Recruitee, Workday) plus the SEEK/Jobstreet search API across five countries, deduplicates, and scores roles for fit.
- Designed the evaluation layer as a rule engine that turns stated hiring requirements — degree bars, language demands, residency locks, seniority — into classifiers, and backed it with 64 regression cases built from verbatim job-ad text. Iterating that suite against real misclassifications cut the false-positive rate on the hardest classifier from 7-in-9 to zero.
- Generated an auto-updating HTML dashboard tracking every application, its evidence, and its outcome.

PROFESSIONAL EXPERIENCE

Data Analyst & Complaint Resolution Specialist | LG Tech Services s.r.o. (iGaming operator), Banská Bystrica, Slovakia
Aug 2025 - Jul 2026

- Validated and maintained platform and reference data in a CMS across multiple markets, and used AI-assisted workflows to draft and review case responses faster while keeping accuracy high.
- Investigated and resolved complaints involving payments, identity verification (KYC), promotional terms, and account issues, documenting decisions and reasoning for each case.

Human Resources Assistant | PT Alzubara, Bekasi, Indonesia *Jan 2024 - Jan 2025*

- Screened and interviewed candidates for overseas roles and guided them through international recruitment and relocation.

Content Creator & Voice-Over Artist (Freelance) | Self-Employed **Jan 2020 - Dec 2023**

- Produced digital content and freelance voice-over work in Indonesian and English, building an online audience through consistent delivery. Also delivered one-to-one online English instruction from April to December 2023.

Production Operator | Stellantis Slovakia *Feb 2025 - Jun 2025*

- Assembly line operations and quality inspections in a high-volume automotive environment.

EDUCATION

Universitas Dirgantara Marsekal Suryadarma - Aeronautical Engineering (studies paused in final year) *2015 - 2019*

SMK Penerbangan Angkasa Bogor - Vocational, Aircraft Maintenance (Airframe & Powerplant study programme) *2010 - 2014*

ADDITIONAL

Available immediately for full-time or contract work, fully remote, and able to cover Asian and European time zones. Indonesian citizen, based in Batam, Indonesia (UTC+7). Comfortable with shift-based schedules, self-directed, and used to collaborating with international teams in English.

A written recommendation letter from a previous employer, covering prompt engineering and AI-assisted data extraction, is available on request.
