AI Evaluation & Data Quality | LLM Tooling | Prompt Engineering

SUMMARY

Twelve months at LG Tech Services in Slovakia investigating payment, KYC, promotion and account complaints, and keeping platform data correct in a CMS across several markets. Since July 2026 I have directed Claude to build two systems I use every day: an AI assistant on the Anthropic and Google APIs with a daily cost limit, and a job-search pipeline whose filtering rules are checked against 65 test cases taken from real adverts. I describe what is needed, test the results on real cases, and ask for fixes until they hold. Native Indonesian, English C1.

KEY SKILLS

LLM Evaluation & Output Review | Labelled Test Cases | Prompt Writing | Claude & Claude Code | Google Gemini | Directing AI Coding Agents | Data Validation & Data Quality | Annotation & Classification to Defined Criteria | Content Management Systems (CMS) | Google Sheets | Native Indonesian | English (C1)

AI PROJECTS

Ava, Multi-Model AI Assistant *(2026) built with Claude*

- Directed Claude to build a personal AI assistant that switches between the Anthropic API (Claude) and the Google Gemini API, runs online on Railway, and keeps a synced notes vault so it remembers earlier sessions.
- Asked for a hard daily limit on API calls, checked against a usage log, so a runaway agent loop stops instead of running up cost.

Job Search AI Agent *(2026) built with Claude Code*

- Directed Claude Code to build a pipeline that scans 17 job feeds plus the JobStreet and LinkedIn searches every morning and removes duplicates, while separate AI research agents add leads they find on the web. An AI reader checks each advert in full and scores it against my CV.
- Defined the hiring rules it checks (degree requirements, language demands, residency locks, seniority) and supplied 65 test cases taken from real job-ad text. When I spotted a wrong recommendation I sent the advert back and we fixed the rule; one missed degree requirement led to a fix that caught four more adverts. The remote-eligibility check first misread 7 of 9 live adverts when its results were checked one by one, and after two rounds of fixes it passed all 15 of its test cases.
- Includes an auto-updating dashboard that tracks every application and the evidence behind it.

PROFESSIONAL EXPERIENCE

Data Analyst & Complaint Resolution Specialist | LG Tech Services s.r.o., Banská Bystrica, Slovakia *Aug 2025 - Jul 2026*

- Validated and maintained platform and reference data in a CMS across multiple markets, and tracked figures and reports in Excel and Google Sheets.
- Investigated and resolved complaints involving payments, identity verification (KYC), promotional terms and account issues, documenting the reasoning for each decision. Drafted case replies with AI and checked each one before it went out.

Production Operator | Stellantis Slovakia *Feb 2025 - Jun 2025*

- Assembly line operations and quality inspections in a high-volume automotive environment.

Human Resources Assistant | PT Alzubara, Bekasi, Indonesia *Jan 2024 - Jan 2025*

- Screened and interviewed candidates for overseas roles and guided them through international recruitment and relocation.

Content Creator & Voice-Over Artist (Freelance) | Self-Employed *Jan 2020 - Dec 2023*

- Produced video content and voice-over work in Indonesian and English. Also gave one-to-one online English lessons from April to December 2023.

EDUCATION

Universitas Dirgantara Marsekal Suryadarma - Aeronautical Engineering (studies paused in final year) *2015 - 2019*

SMK Penerbangan Angkasa Bogor - Vocational, Aircraft Maintenance (Airframe & Powerplant study programme) *2010 - 2014*

ADDITIONAL

Available immediately for full-time or contract work, remote or onsite in Batam, and able to cover Asian and European time zones. Indonesian citizen, based in Batam, Indonesia (UTC+7).

Recommendation letter from Ing. Mária Pindárová, HR Specialist, LG Tech Services s.r.o. (31 July 2026). It mentions careful review of AI outputs, prompt engineering, and AI-powered data extraction. Available on request.
